

Support ticket dataset cleaned and validated with 98.7 quality score.

The support ticket dataset was successfully processed, improving the quality score from 71.2 to 98.7. Cleaning reduced the document count from 148 to 134, primarily through duplicate removal and language filtering. While PII was masked and boilerplate text was removed, 1 document retains encoding damage. Additionally, 4 documents have been flagged for potential mislabeling.

Data quality before	After cleaning	Documents	Numbers fact-checked
71.2/100	98.7/100	148 → 134	13

What this dataset is: This dataset consists of customer support tickets categorized by folder into three distinct classes: billing, shipping, and technical issues. It contains text documents with varying lengths, occasional noise, encoding issues, and boilerplate text.

Findings

INFO Dataset size reduced through cleaning

The cleaning process reduced the document count from 148 down to 134, removing 14 documents in total.

Recommendation: Use the cleaned dataset of 134 documents for training.

Evidence: `cleaning_summary_001`, `txt_overview_001`, `txt_overview_002`

INFO Quality score improved after processing

The clean text data quality score is 98.7 out of 100 following the cleaning steps, compared to the raw score of 71.2 out of 100.

Recommendation: Proceed with model training utilizing the higher quality cleaned dataset.

Evidence: `txt_quality_score_002`, `txt_quality_score_001`

CRITICAL Personal data present in raw documents

An initial scan found that 18 documents, representing 12.16% of the raw data, contained personal data, and unmasked PII must be resolved before releasing or training.

Recommendation: Ensure PII masking is applied consistently to prevent privacy leaks.

Evidence: `txt_pii_001`

INFO Duplicates and near-duplicates removed

Exact duplicate removal eliminated 5 extra copies, while near-duplicate removal dropped 1 additional document.

Recommendation: Keep duplicate removal steps in the data preprocessing pipeline.

Evidence: `cleaning_summary_001`

WARNING Documents read like another label

Code-based label checks identified 4 documents that read more like another label, yielding a centroid agreement percentage of 97.12%.

Recommendation: Manually review and relabel the flagged mismatched documents to reduce noise.

Evidence: `txt_labels_001`

WARNING Boilerplate text found across documents

A repeated confidentiality notice line appeared in 57 documents, accounting for 38.51% of the raw dataset.

Recommendation: Strip boilerplate text to prevent classifiers from learning spurious features.

Evidence: `txt_boilerplate_001`

WARNING Encoding damage remains in cleaned data

Encoding damage remains present in 1 document (technical/ticket_tech_036.txt) even after cleaning.
Recommendation: Manually inspect and fix remaining encoding damage in the affected technical document.
Evidence: txt_quality_002

Next steps

1. Manually review the 4 documents flagged for potential mislabeling.
2. Inspect ticket_tech_036.txt to address the remaining encoding damage.
3. Verify the effectiveness of the PII masking across the 18 documents that originally contained personal data.
4. Proceed with training the classifier using the 134 validated documents.

Cleaning applied

The cleaning plan systematically repairs encoding and markup, strips boilerplate text and PII, removes duplicates and short documents, and flags suspected mislabels for review.

#	Step	What changed	Documents	Why
1	fix_encoding	Changed 2 values in 'text' (e.g. 'Hello, My invoice shows 49,00 â,¬ but th...' → 'Hello, My invoice shows 49,00 € but the ...'; 'Hi, The café delivery in Zürich...	148	Repair garbled characters and currency symbols caused by encoding damage.

#	Step	What changed	Documents	Why
2	strip_html	Changed 7 values in 'text' (e.g. '<div>Hi, I was billed for three seats...' → 'Hi, I was billed for three seats but we ...'; 'help?? ' → 'help??'; '<p>The box...	148	Remove HTML tags and decode entities present in documents.
3	normalize_whitespace	Nothing needed changing: the data already met this rule.	148	Collapse repeated spaces and blank lines across the documents.
4	strip_boilerplate	Nothing needed changing: the data already met this rule.	148	Remove repeated confidentiality notices appearing in over 30% of documents.
5	mask_pii	Changed 17 values in 'text' (e.g. 'Hi, You can reach me at maya.chen@exampl...' → 'Hi, You can reach me at [EMAIL]. The ref...'; 'Hi, Please stop charging my car...	148	Replace personal data such as emails, phone numbers, and card numbers with tags.
6	drop_exact_duplicates	Removed 5 documents (billing/ticket_bill_051.txt, shipping/ticket_ship_045.txt, technical/ticket_tech_031.txt, ...).	148 → 143	Keep only one copy of documents with identical text.
7	drop_near_duplicates	Removed 1 document (shipping/ticket_ship_046.txt).	143 → 142	Remove redundant near-duplicate documents above the similarity threshold.
8	drop_cross_label_duplicates	Nothing needed changing: the data already met this rule.	142	Remove documents whose near-duplicates appear under conflicting labels.
9	drop_short_documents	Removed 3 documents (billing/ticket_bill_053.txt, shipping/ticket_ship_048.txt, technical/ticket_tech_035.txt).	142 → 139	Remove empty or ultra-short documents with fewer than 5 words.
10	filter_language	Removed 5 documents (billing/ticket_bill_056.txt, billing/ticket_bill_057.txt, shipping/ticket_ship_051.txt, ...).	139 → 134	Keep only English documents and unknown short documents while filtering out other languages.
11	flag_suspected_mislabels	Marked 3 documents: suspected mislabel.	134	Mark documents that read like another label for human review.

The same steps are in `cleaning_pipeline.py`, which reruns on the full data.
