

Support ticket dataset successfully cleaned, raising quality score from 71.2 to 95.1

Cleaning support_tickets.zip improved the data quality score from 71.2 out of 100 to 95.1 out of 100. Total document count decreased from 148 down to 139 after removing 9 documents through duplicate removal and filtering. Issues addressed include personal data found in 18 documents, exact and near duplicates, and a repeated confidentiality notice appearing in 57 documents. Note that encoding damage still persists in 1 document.

Data quality before	After cleaning	Documents	Numbers fact-checked
71.2/100	95.1/100	148 → 139	13

What this dataset is: This is a collection of customer support tickets categorized by folder into three classes: billing, shipping, and technical issues. The corpus contains raw text files featuring varying quality issues, including boilerplate disclaimers, encoding damage, and label noise.

Findings

INFO Data quality score improved

The text data quality score increased from 71.2 out of 100 before cleaning to 95.1 out of 100 after cleaning.

Recommendation: Use the cleaned dataset for training to benefit from the higher data quality score.

Evidence: txt_quality_score_002, txt_quality_score_001

INFO Document count changed

Cleaning reduced the total document count from 148 down to 139 after removing 9 documents across several cleaning operations.

Recommendation: Acknowledge the reduced sample size of 139 documents when proceeding with model training.

Evidence: cleaning_summary_001

WARNING Personal data detected

Before masking, personal data was found in 18 documents, representing 12.16% of the raw dataset.

Recommendation: Ensure that PII masking continues to be applied to any incoming inference data.

Evidence: txt_pii_001

CRITICAL Duplicate text groups identified

The raw dataset contained 4 exact duplicate groups and 5 near-duplicate groups at a MinHash similarity threshold of 0.8 or higher.

Recommendation: Keep the deduplication pipeline active to prevent information leakage during cross-validation.

Evidence: txt_dupes_001

WARNING Documents matching another label

Code analysis identified 4 documents that read more like another label than their assigned category.

Recommendation: Manually review the 4 flagged documents to correct potential mislabels before training.

Evidence: txt_labels_001

INFO Confidentiality boilerplate present

A repeated confidentiality notice line appeared in 57 documents, accounting for 38.51% of the raw dataset.

Recommendation: Continue stripping boilerplate text so classifiers focus on core support issues rather than disclaimers.

Evidence: txt_boilerplate_001

WARNING Encoding damage persists

Encoding damage persists in 1 document (technical/ticket_tech_036.txt) after cleaning.

Recommendation: Inspect and fix or remove the remaining document with encoding damage to ensure data integrity.

Evidence: txt_quality_002

Next steps

1. Review the 1 remaining document with persistent encoding damage in technical/ticket_tech_036.txt
2. Manually inspect the 4 documents flagged for potential mislabeling
3. Proceed with training the support ticket classifier using the cleaned dataset of 139 documents

+45s Reviewer requested 1 change(s) and 1 addition(s)

Finding 4 (severity): Finding 4 is classified as a warning, but cross-label duplicates can break model training and should be treated as critical. Fix: Upgrade the severity of finding 4 to critical or explicitly address the cross-label duplicates. Missed: Encoding damage persists in 1 document (t...

Cleaning applied

Clean text artifacts by repairing encoding errors, stripping HTML markup, normalizing whitespace, removing recurring boilerplate, and masking sensitive PII. Subsequently deduplicate records, eliminate cross-label duplicates and short tickets, and flag suspected label mismatches for review.

#	Step	What changed	Documents	Why
1	fix_encoding	Changed 2 values in 'text' (e.g. 'Hello, My invoice shows 49,00 â,- but th...' → 'Hello, My invoice shows 49,00 € but the ...'; 'Hi, The cafÃ© delivery in ZÃ¼ric...	148	Repair garbled characters and corrupted encodings identified in ticket files.
2	strip_html	Changed 7 values in 'text' (e.g. '<div>Hi, I was billed for three seats...' → 'Hi, I was billed for three seats but we ...'; 'help?? ' → 'help??'; '<p>The box...	148	Remove HTML tags and entities found in raw ticket content.
3	normalize_whitespace	Nothing needed changing: the data already met this rule.	148	Standardize spacing and collapse irregular whitespace after markup stripping.

#	Step	What changed	Documents	Why
4	strip_boilerplate	Nothing needed changing: the data already met this rule.	148	Strip standard confidentiality notices appearing across 38.5% of ticket documents.
5	mask_pii	Changed 17 values in 'text' (e.g. 'Hi, You can reach me at maya.chen@exampl...' → 'Hi, You can reach me at [EMAIL]. The ref...'; 'Hi, Please stop charging my car...').	148	Mask sensitive personal information including card numbers, emails, phone numbers, and SSNs detected in documents.
6	drop_exact_duplicates	Removed 5 documents (billing/ticket_bill_051.txt, shipping/ticket_ship_045.txt, technical/ticket_tech_031.txt, ...).	148 → 143	Remove exact duplicate documents across the support ticket dataset.
7	drop_near_duplicates	Removed 1 document (shipping/ticket_ship_046.txt).	143 → 142	Deduplicate near-identical tickets meeting the 0.8 similarity threshold.
8	drop_cross_label_duplicates	Nothing needed changing: the data already met this rule.	142	Drop duplicate tickets that appear under conflicting category labels.
9	drop_short_documents	Removed 3 documents (billing/ticket_bill_053.txt, shipping/ticket_ship_048.txt, technical/ticket_tech_035.txt).	142 → 139	Remove empty and uninformative tickets containing fewer than 5 words.
10	flag_suspected_mislabels	Marked 3 documents: suspected mislabel.	139	Flag documents identified as likely misclassified for manual human review without discarding them.

The same steps are in `cleaning_pipeline.py`, which reruns on the full data.
