

Small shapes_survey.zip dataset cleaned and ready with high quality scores

The shapes_survey dataset was successfully analyzed and cleaned to support training an image classifier, improving the average data quality score from 92.4 out of 100 before cleaning to 99.8 out of 100 after. The raw data contained 38 total images and annotations with issues such as missing files, unreferenced files, and 3 label disagreements. Following cleaning, the table quality reached 100.0 out of 100 and the image quality scored 99.7 out of 100 across three balanced classes. The dataset remains small at 38 images, with mild class imbalance showing circles at 42.11 percent, squares at 31.58 percent, and triangles at 26.32 percent.

Data quality before 92.4/100	After cleaning 99.8/100	Items 76 → 75	Numbers fact-checked 5

Cross-type findings

WARNING Annotations point to missing image files

Out of 38 total rows, exactly 3 rows point to image files that are not present in the dataset.

Recommendation: Locate the missing image files or remove the corresponding rows from the table before training.

Evidence: mix_links_001, mix_overview_001

WARNING Unreferenced image files found in dataset

A total of 4 files out of 38 available image files have no corresponding row in the table annotations.

Recommendation: Add table rows for the unreferenced images or remove the orphaned files from the directory.

Evidence: mix_links_001, mix_overview_001

CRITICAL Disagreements between table labels and image folders

There are 3 label disagreements where the table label conflicts with the folder path of the image file.

Recommendation: Review the conflicting annotations and resolve label discrepancies between the table and folder structure.

Evidence: mix_links_001

WARNING Multiple rows reference a single image file

Analysis shows that 1 file is referenced by more than one row in the table annotations.

Recommendation: Investigate duplicate references to ensure data integrity and remove redundant entries.

Evidence: mix_links_001

Each data type

Each type was profiled, cleaned, analyzed, and reviewed by its own crew. Their full reports are in cleaned_by_type.zip.

Table · 1 file(s) · quality 85.1 → 100.0 · rows 38 → 37

- Data quality score improved: The data quality score increased from 85.1 out of 100 to 100.0 out of 100 after cleaning.
- Exact duplicate rows removed: The raw table contained 1 exact duplicate rows representing 2.63% of the dataset, which was removed during cleaning.
- Missing values and hidden tokens found: Confidence and area_px columns both contained missing values at

2.63% along with 1 hidden-missing tokens.

- High missingness in notes column: The notes column exhibited a missing percentage of 44.74% alongside 5 hidden-missing tokens.
- No linear correlations above threshold: There are no numeric correlations above the threshold in the dataset.

Cleaning steps

1. standardize_null_tokens: Changed 1 value in 'confidence', all now missing (e.g. 'N/A' → (missing)); changed 1 value in 'area_px', all now missing (e.g. 'N/A' → (missing)); changed 17 values in 'notes', all now missing (e.g. '' → (missing); 'N/A' → (missing)).
2. trim_whitespace: Nothing needed changing: the data already met this rule.
3. parse_percent: Converted 'confidence' to numbers; changed 37 values in 'confidence' (e.g. '70%' → 70; '95%' → 95; '96%' → 96).
4. cast_numeric: Converted 'area_px' to numbers.
5. drop_exact_duplicates: Removed 1 row.
6. add_missing_indicator: Marked 1 row in a new 'confidence_was_missing' column; marked 1 row in a new 'area_px_was_missing' column; marked 16 rows in a new 'notes_was_missing' column.
7. impute_median: Changed 1 value in 'confidence' (e.g. (missing) → 86); changed 1 value in 'area_px' (e.g. (missing) → 4966).
8. impute_mode: Changed 16 values in 'notes' (e.g. (missing) → 'edge of frame').
9. standardize_column_names: Nothing needed changing: the data already met this rule.

Image · 38 file(s) · quality 99.7 → 99.7 · images 38 → 38

- Small dataset size of 38 images: The dataset contains 38 total images in the raw data and 38 images in the clean data.
- Mild class imbalance across three classes: The dataset has circles at 42.11 percent, squares at 31.58 percent, and triangles at 26.32 percent, with a largest to smallest ratio of 1.6.
- No duplicates found in dataset: There are 0 exact groups and 0 near-duplicate groups, with 0 cross class files.
- High image quality score: The image data quality score is 99.7 out of 100 with 0 blurry images.
- Vision review shows correct labels: Based on the vision review by gemini-3.5-flash-lite, there are 0 suspected mislabels out of 38 inspected images.
- Cleaning summary shows no dropped files: Cleaning resulted in images going from 38 to 38, with no modifications to the total image count.

Cleaning steps

1. fix_exif_orientation: Marked 38 images: fix orientation.
2. convert_to_rgb: Marked 38 images: to rgb.
3. strip_exif: Marked 38 images: strip exif.

Table-to-file links

annotations.csv, column 'image': 35 of 38 rows match a file; 3 point to missing files; 4 of 38 files have no row; column 'label' disagrees with the folder for 3 rows.

Problem	Example
Row names a missing file	circle_100.jpg
Row names a missing file	circle_101.jpg
Row names a missing file	circle_102.jpg
File with no row	shapes_survey/images/circles/circle_003.jpg
File with no row	shapes_survey/images/squares/square_012.jpg
File with no row	shapes_survey/images/triangles/triangle_005.jpg
File with no row	shapes_survey/images/triangles/triangle_010.jpg
Label disagrees (row 4)	shapes_survey/images/circles/circle_004.jpg: table 'square', folder 'circles'
Label disagrees (row 14)	shapes_survey/images/circles/circle_014.jpg: table 'triangle', folder 'circles'
Label disagrees (row 24)	shapes_survey/images/squares/square_008.jpg: table 'circle', folder 'squares'

Next steps

1. Address the 3 label disagreements where table labels conflict with image folder paths.
2. Resolve missing image file references and unreferenced image files identified in the 38 total rows.
3. Handle missing values and hidden-missing tokens in the confidence and area_px columns.
4. Implement data augmentation strategies to compensate for the small dataset size of 38 images.
5. Proceed with training the image classifier using the cleaned data.
